Subject: CITY-COUNTY COORDINATION MEETING AGENDA - Friday 10/10/2014 - Woodland
Attachments: 2014-1010_City-County Woodland_AGENDA pdf, 2014-0722_PopulationComments-Howsley pdf, 2014-0729_InfrastructurePercentageDeduction-DEAB-Comments pdf

Please find the agenda for next Friday's City-County Coordination meeting attached, along with two other documents to be reviewed/discussed.

DIRECTIONS to Woodland Police Station/City Council Chambers from Clark County:

I-5 N to EXIT 21

Stay in LEFT lane on off-ramp and go straight through intersection onto ATLANTIC AVE. (You will drive past the Oak Tree Restaurant on your right.)

Continue north on Atlantic Avenue until just before it turns into an on-ramp onto I-5.

Take a RIGHT turn onto E. Scott Ave. As you turn, Tsugawa Nursery will be on your left.

Continue on E. Scott Ave. for about ¼ mile.

200 E. Scott Ave will be on your left, just before you reach the stop sign.

It is a gray building with navy blue trim.

County–City Coordination Meeting AGENDA

Date: Friday, October 10, 2014

Time: 10:00 AM to 11:30 PM

Location:

City of Woodland, City Hall
New Woodland Police Station
200 E Scott Avenue.
Woodland, WA 98674

City-County Planning Directors Coordination Meeting

Outcomes:

- Accurate representation of City Issues/Requests.
- Coordination on all BOCC work sessions on the Comp Plan update.
- Which cities are participating in the second open houses?

Agenda Item:	Introduced by:
Welcome & Introductions (5 minutes)	Oliver Orjako
Review of last meeting summary notes (5 minutes)	All
Discussion of Alternative 2 (County-Initiated Changes 30 minutes)	Gordy
Discussion of DEAB memo to BOCC on "Infrastructure Percent Deduction" and BIA "Population growth rate" (20 minutes)	All
Follow –up on growth allocation/timing (10 minutes)	All
Roundtable (10 minutes)	All
Next Meeting Agenda and Location (5 minutes)	All

Please, plan for a group lunch in Woodland – See options!

Next meeting: November 14 - Battle Ground (10:00 – 12:00 p.m.)

Please, plan on a group lunch in Battle Ground after the meeting!

December 12, 2014 in Camas (Does the group want to postpone December meeting?)

Re: **2016 Comprehensive Growth Management Plan Update - Population**

Dear Oliver:

I write again to follow up on the population issue, and to place the new Washington OFM population data into the context of longer range data regarding the steady growth of Clark County's population. We continue to believe that the assumed growth rate of 1.12% is based on the erroneous premise that the lower growth rates of the Great Recession will continue through the planning period. As noted by the Brookings Institution, the recession years were an anomaly, and now popular metropolitan areas are returning to faster growth rates, especially our own. Their complete report is attached.

The growth rate is important because it drives the need for housing and employment lands. In addition, the per capita types and quantities of needed land depend on the age of the growing population. Sunbelt areas popular among retirees need land for housing, but require less land for schools and parks and employment uses. In contrast, areas with an influx of young adults need surplus land for housing as young people transition from apartments to houses. Young adults also drive the need for parks, employment and educational lands, as their children enter school and the parents settle into their careers.

The Brookings Institution data shows that our metro area is third highest in the entire country for in migration of young adults aged 25-34. This data is consistent with OFM's 2013 Population Trends data which shows the percentage of senior citizens in Clark County is below the state average. (Attached, see Table 10) As a result, our metro area needs more land than one might surmise from the population growth alone. Clark County should account for the youthful aspect of in migration and the additional demand for land it requires.

The new population data published by the OFM on June 30 also demonstrates the need for additional land. More specifically, it shows the Clark County 2013 population growth was 1.68%. The result of this accelerated growth is that prior estimates have proven too low. For example, OFM's 2012 GMA Intermediate Series projection was for 447,201 residents in 2015. In 2014, the population was already up to 442,800, with 7300 being added the last year. If another 7300 newcomers arrive this year (with the population year running from April through March), the 2015 population will be 450,100, which is

July 22, 2014

Page 2

2899 people more than projected. That already requires 1089 more dwelling units than projected under OFM's forecast.¹

These projections have been off the mark because OFM uses a remarkably short horizon when preparing its forecasts. As described in the 2012 Projections – County Growth Management Population Projections by Age and Sex: 2010-2040 report, “Caution is recommended when users see variation between current population estimates and long term projections.” The problem is that OFM's projections are adjusted up and down every five years based on the most recent five years of data. Thus the 2007 projections have proven too high as they were based on the boom years 2002-2007. And the 2012 projections the county relies on now are too low as they are based on the Great Recession.

The 2012 report, which is based on a November, 2011 forecast, notes the reduced migration of the recession, and remarkably states: “[n]o attempt is made to predict the timing and magnitude of any significant migration rebound.” In other words, the data the county relies on presumes there will not be an economic recovery after 2011. But now the data is in, through 2013, which shows the in migration is rebounding, and the annual overall growth rate is up to 1.67%. Obviously the 2012 report erred when it assumed there would not be a rebound.

The essential point is that basing a 30 year projection on a 5 year trend has proven to be inaccurate. We urge the county to look at longer term population growth patterns as it considers land needs for the GMA update.

We examined 50 years of OFM population data for Clark County, from 1960 through 2010. Averaged over 50 years, the annual growth rate is 1.28%, which is 14% higher than the county assumes for the coming years. At the very least, the county should use this 50 year average because it smooths out economic and generational variations, and eliminates the need to predict the timing and magnitude of recessions, or baby booms, or average years.

Additional Data Support

As you are well aware, Clark County is unique as a border county sharing a metropolitan statistical area (MSA) with Portland and its surrounding urban areas. Metro is also updating its comprehensive plan and in their data suggest that the Portland/Vancouver MSA will grow between 400,000 and 750,00 by 2035 with 600,000 being the likely scenario. This is similar to the growth experienced in the MSA between 1990 and 2010 of 702,000 people from 1.5 million to 2.2 million residents. Metro is currently working to estimate where the growth will be distributed throughout the region, but if history is any indication again, Clark County will likely see a greater share of the allocation than many of the other urban areas in the region.

¹ The County adopted a 2.66 persons per household assumption based on 2010 US Census Data.

July 22, 2014

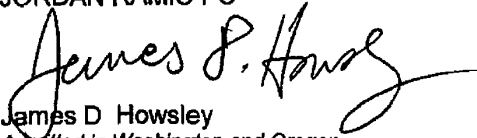

Page 3

Request

We believe that the Board should reconsider the population estimates in light of the new data streaming from OFM and Metro. At the very least a work session on the matter to understand the private sector's view on the matter and the new data, especially in light of the unprecedented downturn in migration due to the great recession.

Very truly yours,

Economic Improvement Nudges U.S. Migration to Normal

By: William H. Frey

New Census Bureau population estimates for the second full year after the 2010 Census show something resembling “normal” population shifts after five years of recession-induced anomaly. During that period, we witnessed a downsized exodus from traditional out-migration areas, mostly in the North, and similarly suppressed in-flows to previously fast-growing Sun Belt areas. A host of factors, including lack of jobs and mortgage financing in the wake of the Great Recession, brought national migration rates down to post-war lows, essentially freezing people in place. Immigration levels were down as well.

But an analysis of the new numbers for the period of July 2011 to July 2012 implies that the migration log jam maybe coming to an end, especially for large metropolitan areas. As a group, such areas in the South and West showed a growth uptick, a year after registering their lowest growth rate in decades. They also received their biggest domestic in-migration since 2001. At the same time, large areas in the Northeast and Midwest saw their greatest migration losses since 2008, which is when their recession-related “migrant retention” started to emerge.

Each of the 20 fastest-growing metropolitan areas in 2011-2012 (among the top 100) were located in the South and West and most grew more rapidly than in the previous year—including Charleston, Orlando, Houston, Dallas, and San Antonio. Similarly, each of the 20 slowest growing or declining areas were located in the Northeast and Midwest, including Youngstown, Buffalo, Pittsburgh, and St. Louis, most of which grew more slowly in the past year. So after a five-year hiatus, Snow Belt/Sun Belt growth trajectories are, once again, heading in opposite directions.

An examination of the domestic migration patterns provides further emphasis, with some surprises (See *map below*). Here, each of the 2011-2012 top gainers showed higher levels of migration than in 2010-2011. Not unexpectedly, Dallas and Houston rank first and second, with Austin and San Antonio not far behind. These Texas areas were migration draws, even during the recent down period, as they were not as severely affected by national housing and job market ills.

Greatest Domestic In- and Out-Migration Metro Areas, 2011-2012

Circles are sized by number of migrants to or from each metro area. Red indicates out-migration; blue indicates in-migration.

Yet the rise of Phoenix, as it were, to become the third-biggest migration gainer is of special note, given its plunge in the post-housing bubble years (See Figure 1 below). Similar turnarounds are evident in Las Vegas, which experienced net out-migration over the prior three years, and Atlanta, Orlando, Cape Coral, and Jacksonville, among others, each showing in-migration levels not seen since at least 2008.

At the other extreme, migration losses were especially noteworthy in Northeastern metropolitan areas, New York, Philadelphia, Hartford, Syracuse, as well as a slew of smaller metropolitan areas in New England and Upstate New York. In each case, the losses exceeded those of the previous year and seemed to put an end to their recession-era migrant retention. Chicago also experienced reduced out-migration or migration retention over the 2007-2010 period, but began show increased out-movement a year ahead of some others. Los Angeles has long been a Sun Belt outlier, feeding migrants to the rest of the West.

Annual Domestic Migration Rates, 2000-2001 to 2011-2012

Immigration levels also took a hit over the past five years, in part, due to the same causes: a poor economy in general and a lack of jobs in construction and other immigrant employing industries. But those numbers are also starting to rise—approaching 1 million annually. This may prove timely for older areas starting to lose their hold on domestic migrants by providing an “immigrant cushion.” The new Census estimates show that each of the 100 largest metropolitan areas received more immigrants in 2011-2012 than in 2010-2011.

There is still one area that has not yet reached “normal” expectations, according to the new data: migration to the nation's outer suburbs. According to a Brookings framework used in previous studies, outer exurban counties are experiencing a net out-migration for the second year in a row and another set of counties classed as “emerging suburbs” continue to grow tepidly, well below earlier years.

Nonetheless, the new Census population estimates make a compelling case that, for better or worse, traditional cross-regional migration patterns are returning. Of course, this turning point is a precarious one because it is dependent on the availability of jobs and a further improvement in the economy. Lets cross our fingers and hope it continues.

Millennial and Senior Migrants Follow Different Post-Recession Paths

By: William H. Frey

Just when it appeared that young adult members of the millennial generation were about to escape being “stuck in place” due to the Great Recession and its aftermath, new migration data from two Census sources indicate that they are not free yet. At the same time, it appears that seniors, including older baby boomers and retirees, are returning to more normal migration patterns.

The diverging generational migration paths are revealed in the Current Population Survey's Annual Social and Economic Supplement (ASEC) trend data through 2012-2013 and the American Community Survey for the three year, post-recession period, 2010-2012, released this week.

In the past year, young adults aged 25-34 moved at historically low levels, down to 20.2 percent (Figure 1). This is primarily due to a continued dip in local, within county migration, the kind most heavily impacted by housing needs and family formation. Behind the trend is the recession's resultant credit crunch and continued underemployment effectively reducing homeownership possibilities.

Longer distance moves, between counties and states, did pick up among these young adults in the last two years (at rates in the 6.8 percent to 7 percent range, up from 6.4 percent in 2010-2011). But even these stand at levels well below the 8 percent to 10 percent long distance migration rates observed prior to 2007.

Annual Migration Rates, 2000-2001 to 2012-2013, Young Adults, Ages 25-34

The post-recession moves of seniors aged 55 and above tell a different story. First, they reflect late life job-related moves, tailing off rather than starting careers, along with moves to retirement. Due to more settled life circumstances, older adult migration rates have always been lower than those of young adults. Second, while they did experience a recession-related migration drop-off it was not nearly as severe as for millennials. As the economy picked up and the stock market rebounded, the overall senior migration rate rose from a low in 2011, and their long distance migration rate has steadily increased since 2009.

This post-recession migration revival is most evident in the magnitude and destinations of senior migration. Calculations from one-year moves over the years 2009-2010, 2010-2011, and 2011-12 show a renewed flow of older migrants to both traditional and new “retirement magnet” metropolitan areas. The five greatest gaining areas over the 2009-2012 period—Phoenix, Riverside, Tampa, Atlanta, and Denver—attracted substantially more migrants than during the 2006-2009 recession period. (See PDF Table). Each of the top 12, including the additional Florida areas of Orlando and Jacksonville, received as many or more older migrants than during the recession. Florida showed an average annual gain of 55,000 older people in 2009-2012 compared with just 32,000 in 2006-2009. In short, an emerging senior boom is boosting not only traditional retirement destinations but also emerging ones in the Southeast, Mountain West and Texas.

Young adult millennials, in contrast, did not experience nearly as much of a resurgence. One stark exception to this is Washington D.C. which saw a renewal of young adults in the post recession period—gaining on average 12,500 annually between 2009 and 2012—compared to the loss of young adults during the recession. (See PDF Table). The existence of both government and non-government employment opportunities in a highly educated “millennial friendly” environment make the nation’s capital an attractive destination until migration flows to a broader group of areas emerge. A few other areas, including San Francisco and Minneapolis, have showed a rising post-recession young adult boom as

well.

Yet, for the most part, the set of destinations that were able to attract young adults during the recession has not broadened. And except for a few, these millennial magnets attracted fewer young people in the post-recession period. Among the 20 greatest migration gainers from 2009 to 2012, 12 drew fewer young adults in the post-recession period than during the recession. Especially noteworthy is smaller post-recession draw to Texas metropolitan areas like Houston, Dallas, and Austin, and small young adult gains or declines for otherwise rebounding Florida metropolitan areas.

The return to normal for U.S. migration patterns remains a bumpy ride. Perhaps the new senior surge will provide some impetus for broader economic gains in their Sun Belt destinations. What is concerning is that there continues to be a pent-up demand for migration among young adults, the largest potential mover group and the lifeblood of our future housing and labor markets.

PART I
State, County, and City Populations

POPULATION TRENDS provides demographic data for Washington state, counties, cities, and towns as of April 1, 2013. Population determinations contained in this document are developed by the Office of Financial Management (OFM) and represent the state's official population figures. Annual population figures for Washington's cities, towns, and counties have been developed and released for over four decades. These estimates are cited in numerous statutes using population as criteria for fund allocations, program eligibility, and for determining county participation under the Growth Management Act.

The 2013 population estimates will be used in state program administration and in allocation of selected state revenues beginning in January 2014 as specified in RCW 43.62.020, RCW 36.13.100 and RCW 43.62.030. Liquor monies will be allocated to counties using 2013 population estimates in September 2013 and to cities and towns in January 2014 (ESHB 2823).

Summary of Population Trends: Washington State

The April 1, 2013 population estimate places Washington's population at 6,882,400. This represents an increase of 64,630, or 0.95 percent, since last year. This is the largest increase this decade, suggesting that population growth may be starting to rebound after several years of slow growth.

This year's higher growth rate was primarily due to an increase in migration. The net migration gain of 26,800 persons accounted for 41 percent of total growth. In 2011 and 2012, net migration as a share of total growth was 13 percent and 24 percent, respectively. Although current migration is lower than the prior decade average of 45,000, it is more than twice as high as last year suggesting that an improving economy is making the state a more attractive destination for migrants.

Figure 1 State Population Change and Components of Change

Driver license data is used to provide trend information about migration flows between Washington and other states. Analysis of drivers' movements reveals a slight increase in net migration in recent years. Approximately 30 to 40 percent of in-movers to Washington come from California and Oregon. The current 12-month moving total of in-

movers from those two states is 45,000, up 2,400 from last year. Driver licenses surrendered to those two states from Washington increased by 1,000 to 39,100.

Figure 2 Driver Movement between Washington, California and Oregon

Housing, another indicator of population change, continued to improve in 2013. Washington added approximately 23,300 new housing units last year,

4,600 more than the prior year. For comparison purposes, the state added an average of 43,500 housing units per year during the 2000s decade.

Figure 3. Housing Unit Change

The number of births increased in 2013. Between April 2012 and April 2013, Washington had a crude birth rate of 12.9 births per 1,000 persons. While low by historical standards, this represents a slight improvement over the past few years.

remain elevated for quite some time. Contrary to expectations, women started having fewer children, most likely in response to economic uncertainty. This downward trend seems to have reversed itself recently.

Beginning in 2006, the children of the baby boomers started reaching childbearing age and the number of births in Washington began to increase. This high level of births, referred to by demographers as the "third wave" of the baby boom, was expected to

While the number of births increased by 900 persons last year to 88,400, the number of deaths has climbed rather steadily since 2000, reaching 50,500 in 2013. In 2013, 37,900 persons were added to the state's population due to natural increase.

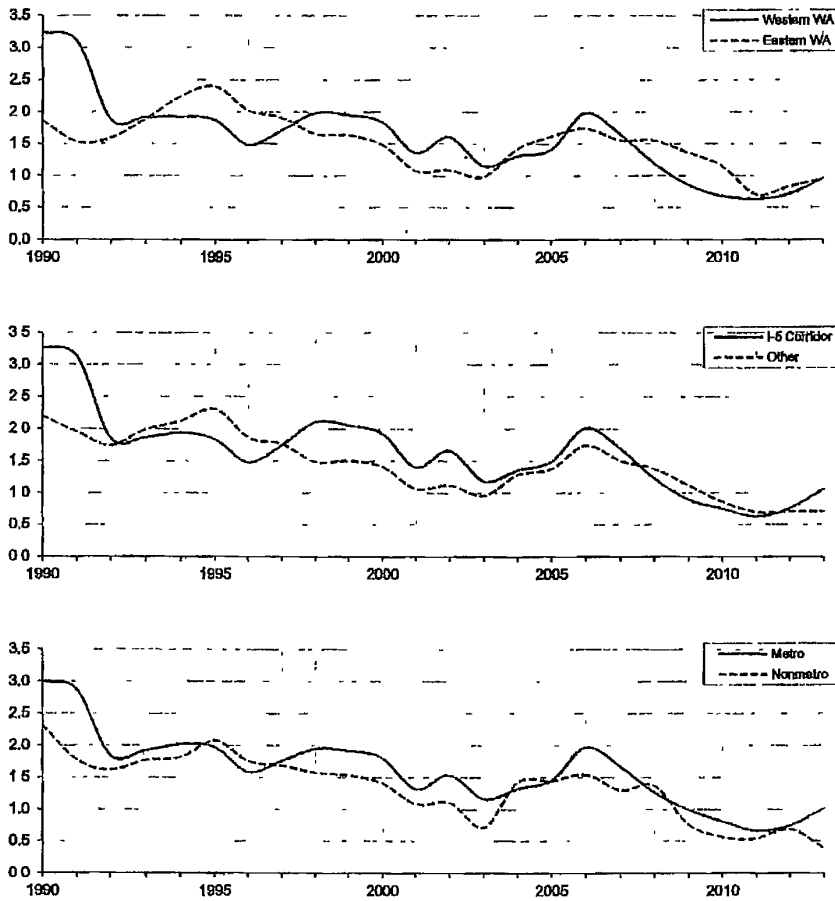

Summary of Population Trends: Counties and Cities

This year's population growth is concentrated in large metropolitan counties. Seventy-three percent of the growth occurred in the state's five largest counties: Clark, King, Pierce, Snohomish, and Spokane. In 2012, these counties accounted for about 65 percent of total population growth. King County accounted for the largest share of state growth this year with 39 percent of the total, with Snohomish coming in a distant second at 12 percent.

to examine population growth in more detail. At present, 78 percent of Washingtonians live in Western Washington—a proportion that has remained relatively constant over the past two decades. In 2013, each region grew by just under one percent although Western Washington grew at a slightly faster rate compared to the prior year. Counties along the Interstate 5 corridor grew at a faster pace relative to the rest of the state where the annual growth rate was more modest. When grouped by metropolitan statistical area designation, metropolitan counties outperformed nonmetropolitan ones by more than half a percentage point.

Different county classification schemes can be used

Figure 4. Percent Population Change by Region

The geographic distribution of population change by county can be seen in Figure 5. Franklin and Benton counties experienced the largest percentage increase in annual growth at 2.8 percent and 1.9 percent, respectively. In 2013, nine counties grew at a faster rate than the state. They are, in descending order:

Franklin, Benton, Thurston, King, Whatcom, Snohomish, Clark, Douglas, and Kittitas. Columbia, Ferry, Garfield, Kitsap, Lewis, Lincoln, and Wahkiakum counties exhibited either zero growth this past year or even lost population.

Figure 5. Distribution of Population Change by County

The population of Washington state incorporated places totaled 4,432,700 on April 1, 2013, an increase of 53,500 people since last year. Most of the population growth in incorporated areas was due to natural increase and net migration, rather than annexation. Of the total amount of increase in the incorporated area population, only 8,900, was due to annexation. The population in unincorporated areas increased by 11,200, including population lost due to annexation.

In 1990, the state's population was almost evenly split between incorporated and unincorporated areas. By 2013, the share of the state's population in incorporated areas had grown to 64 percent. As shown in Figure 6, the unincorporated area population has remained relatively constant over time while the incorporated population has increased considerably. However, if one takes the effects of annexation and incorporation into account, one can see that their growth patterns are actually quite similar.

Figure 6. Population Growth and Annexation and Incorporation

Population growth in incorporated areas is largely concentrated in many of the state's larger cities and the Tri-Cities area. The top 10 cities for population growth, in descending order, are Seattle, Bellevue, Pasco, Auburn, Renton, Kent, Spokane,

Vancouver, Richland, and Kennewick. Cities with a population of 50,000 or more received almost 70 percent of the state's incorporated population growth. More than one-third of Washington cities exhibited zero or negative growth in 2013.

Table 1. Distribution of Cities by Population Size

Size	Number of Cities	Percent of Cities	Population Change	Percent of Population Change
GT 100,000	7	2.5	23,300	43.6
50,000 to 99,999	14	5.0	13,825	25.9
25,000 to 49,999	19	6.8	4,320	8.1
10,000 to 24,999	38	13.5	7,250	13.6
1,500 to 9,999	101	35.9	4,595	8.6
LT 1,500	102	36.3	186	0.3
Number of Cities	281	100.0	53,476	100.0

Table 2. Distribution of Cities by Population Growth Rate

Growth Rate	Number of Cities	Percent of Cities	Population Change	Percent of Population Change
2.50% or More	30	10.7	20,034	37.5
1.50% to 2.49%	27	9.6	18,884	35.3
1.00% to 1.49%	21	7.5	6,764	12.6
0.01% to 0.99%	101	35.9	10,215	19.1
Zero	64	22.8	0	0.0
Negative Change	38	13.5	-2,421	-4.5
Number of Cities	281	100.0	53,476	100.0

Housing growth, being closely allied with population growth, is also concentrated in the state's largest counties. Nearly 60 percent of all new housing is located in the four counties that make up the Puget Sound metropolitan planning region, up from almost 50 percent in 2012. King County leads all counties

with more than 7,500 new units, or approximately one-third of the state's total housing increase. The top five counties with the most housing growth this past year in descending order are: King, Snohomish, Pierce, Spokane, and Thurston counties.

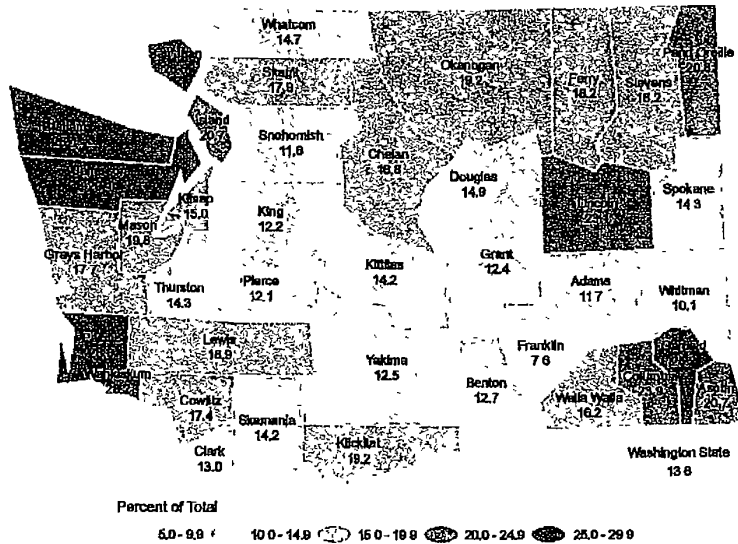

Figure 7. County Housing Growth

Washington's elderly population continues to grow. In 2013, persons age 65 and over made up approximately 13.6 percent of the state's population, up by 108,000 people, or 1.3 percent, from 2010. Some counties have a much larger share of the 65 and over population than others. The map below shows the distribution of the elderly population by

county. Over one in every four persons in Clallam, Jefferson, Pacific, Garfield, San Juan, and Wahkiakum counties is 65 years or older. Reasons for increasing shares of elderly population include outmigration of younger persons and/or in migration of retirees.

Figure 8 Percent of County Population Aged 65 and Over

An aging population is having a noticeable impact on natural increase in some counties. Ten counties experienced negative natural increase over the period

2010-2013: Clallam, Columbia, Ferry, Garfield, Jefferson, Lincoln, Pacific, Pend Oreille, San Juan, and Wahkiakum.

Notes: • The county and municipal populations shown for 2010 are, with a few exceptions, the 2010 federal census PL 94-174 counts. Some 2010 counts may differ from the federal census. See Table 5 for more information.
 • With the exception of corrections to the federal census counts, annual estimates in this official series are not revised on the basis of other information that becomes available after the estimate date. As a result, population estimates shown for the individual years may not be comparable. Figures often vary due to data corrections or the use of new survey or census data that are not available on an annual basis.

Symbols: * State Certified Special Census
 # Informal census. A population and housing count that is considered accurate but does not meet all special census certification
 \$ Adjusted Census 2010 population and housing. See Table 5 for more information

Table 5

Notes on Census Corrections and the Differences between the 2010 Federal Census Public Law 94-171 Counts and the Official 2010 Population Estimates by the Office of Financial Management

The Office of Financial Management (OFM) is responsible for April 1 population determinations that are used for state revenue allocations to local government and in selected state programs requiring population as a criterion for funding and/or administration.

Abbreviations: Occ. - Occupied, Vac. - Vacant, HH - Household, GQ - Group Quarters

I. Corrections to 2010 Federal Counts Due to Misallocation of Housing Units and/or Group Quarters

State and local governments in Washington state did not submit any formal challenges to the Census Bureau regarding their 2010 Census counts. The deadline for submitting a challenge to the Count Question Resolution (CQR) program ended June 30, 2013. Thus, there are no federal corrections associated with the 2010 Census.

Notes on Census Corrections and the Differences between the 2010 Federal Census Public Law 94-171 Counts and the Official 2010 Population Estimates by the Office of Financial Management

- Notes
- Part cities combined for ranking purposes
 - Negative annexed populations mean the city/town either de-annexed area or had a boundary line adjustment with either an adjoining city/town or their county.
 - With few exceptions, year 2010 data are federal census P.L. 94-171 data. See Table 5 for more information.

- Notes:
- The 2010 counts for total housing units represent federal census counts, special city census counts, or OFM adjusted counts that control for annexations occurring between January 1 and April 1 in the decennial census year.
 - Estimates of housing units by structure type for 2010 are developed using an allocation procedure based on Census 2010 Summary File 1 data, housing completion data reported by cities and counties (2000-2009), annexation census data (2000-2009), and Census 2000 Summary File 3 data. The resulting 2010 estimates maintain the 2010 census counts of total housing units, occupied housing units, and population in housing units.
 - Housing unit estimates after 2010 are developed using housing completion data reported by cities and counties (2011-present), and annexation census data (2011-present).

- Notes
- Boundary changes are due to annexations, de-annexations, and boundary line adjustments.
 - Cities and towns with annexed areas or boundary line adjustments that total less than 0.005 square miles are shown as 0.00 square miles.
 - A negative area annexed means the city or town either de-annexed area or had a boundary line adjustment with either the county or an adjoining city or town.
 - Occ. - Occupied

PART III
Supplemental Population Information

ADDITIONAL INFORMATION about the development of annual population estimates can be found in this chapter. The information includes state statutes related to OFM's official April 1 population determinations, the Small Area Estimate

Program, how to access OFM population data products, State Data Center and Business and Industry Data Center contacts, and acknowledgement of the various organizations that provide OFM with data.

Washington State Statutes Related to the Population Estimates Program

Population estimates for the state, counties, cities, and towns and their use are governed by a number of state statutes.

RCW 43 41.110: Assigns OFM duties related to population and annexation.

RCW 43.62 040 Agencies, cities, towns, and counties shall furnish OFM whatever aid is needed in performance of its population studies. OFM's population determinations are final and conclusive.

RCW 43.62.030: Requires annual estimates as of April 1 of each year for cities and towns. Used for allocation of specific funds the following January 1. Only persons meeting resident criteria are to be included in the population estimates.

RCW 43.62.035: Requires annual estimates as of April 1 of each year for all counties. Used for allocation of specific funds in July of the same year.

Population Estimates Development

Population estimates represent the *resident population* as defined by the U.S. Census Bureau. This includes persons in housing units, military personnel and their dependents, persons living in correctional institutions, and persons living in residential care facilities. College students are considered residents of the place where they live while attending school. Seasonal populations, such as vacationers or migrant farm workers, are counted at their usual residence. Persons with no usual place of residence are counted where they are located on April 1.

The estimates are developed as accurately as possible from standard and tested methods. The specific procedures used to develop estimates depend on the availability of state and local area data.

State estimates are developed by a component method. Population age 64 and under is based on vital events and an estimate of net migration based on school-age migration and wage and salary employment change.

County populations are developed by three methods: the component method, ratio correlation, and the housing unit method. Ratio correlation relates change in the county's share of the state population over a specific ten-year period to changes in the county's share of a set of symptomatic data over the same time period. The current equation contains school enrollment, voter registrations, auto registrations, housing, births, and deaths to persons age 65 or over. Changes in the symptomatic data are then tracked annually through the current decade to estimate population. The housing unit method estimates population on the basis of housing change and assumptions about occupancy rates and average household size.

City/town populations include both estimates and actual counts. A small number of cities census their entire population each year. The housing unit method is used by OFM to prepare population estimates for the remaining cities. City population estimates are determined based on changes in the housing stock and counts of persons residing in group quarters facilities. The household population is estimated based on knowledge of housing unit

change since last census, occupancy rates and average household size. The population residing in group quarters facilities and from recent annexations are subsequently added to the estimate of household population to derive the final estimate. The reliability of the housing unit estimation method depends on accurately determining changes to the

Small Area Estimates Program

OFM's annual city and county population determinations satisfy a variety of needs related to planning and program administration. However, population and housing estimates are frequently required for areas that do not coincide with city or county boundaries. The Small Area Estimate Program (SAEP) was developed to produce population and housing estimates for such areas while maintaining as much consistency as possible with OFM's city and county estimates.

The SAEP produces a consistent set of small area population and housing data for statewide applications. SAEP estimates are generated for census areas, 'special' areas that are statutorily required, and other areas of statewide significance. Small areas are defined as geographic areas below the level of the state that may or may not be coincident with the boundaries of U. S. Census Bureau geographic entities.

SAEP estimates are not the official state population estimates used for revenue distribution and program administration for cities and counties. Although city and county population totals from the state's official population estimates program serve as control numbers, the SAEP targets different geographic areas and therefore has different data and methodological requirements.

The SAEP takes OFM's official April 1 city and county population and housing estimates and distributes these to census blocks based on a variety of information including: residential building permits, assessor records, postal delivery statistics, and decennial census information.

housing stock, the occupancy rate, and average household size.

Methods and procedures may be abbreviated during the early part of each decade because required data details from the decennial census are released to the individual states according to a fixed schedule.

The SAEP utilizes area-weighted and parcel-point weighted areal interpolation techniques to develop estimates for small areas that do not follow census geographies. This strategy is intended to take advantage of more geographically precise information where it is available.

SAEP data products are summarized by geography and are available in tabular and GIS shapefile format. Each SAEP data product contains information on the following demographic measures: total population, household population, group quarters population, total housing units, and occupied housing units. Estimates for the following geographic areas are provided:

Census geographic areas

- Census block groups
- Census tracts
- Census designated places
- Congressional districts
- Public Use Microdata Areas
- School districts
- State legislative districts
- Tribal areas
- Urban areas
- Urban growth areas
- ZIP Code Tabulation Areas

Other geographic areas

- Fire protection districts
- Selected islands
- Urban growth areas (unincorporated parts)
- Water Resource Inventory Areas

Population Data Products

OFM produces a number of population data products. To find frequently requested population items, please see <http://www.ofm.wa.gov/pop/key2pop.asp> or click on one of the links below.

You can subscribe to the OFM-FORECASTING LISTSERV to receive email notifications about updated OFM data products at <http://listserv.wa.gov/cgi-bin/wa?SUBED1=ofm-forecasting&A=1>.

Acknowledgements

OFM would like to thank the following entities for their ongoing help and cooperation in providing data and/or assistance in developing annual populations:

- Center for Health Statistics, Department of Health for supplying vital statistics data.
- Office of Research and Data Analysis, Department of Social and Health Services for providing selected institutional population counts.
- Department of Veterans Affairs for furnishing veteran institutional counts.
- Department of Licensing for furnishing driver license and vehicle registration data.
- Office of the Superintendent of Public Instruction for furnishing student enrollment counts.
- Department of Employment Security for providing state employment data.
- Agency personnel in other states that provide reciprocal data on interstate movements.
- Puget Sound Regional Council for providing building permit information.

- City, county, and regional planners/staff for providing data used in the development of April 1 population estimates.
- Housing directors at colleges and universities for submitting April 1 dormitory counts.
- Armed forces personnel at major military installations for contributing data on current resident military population counts.
- Municipal Research and Services Center for providing technical assistance/resources related to annexation and revenue distribution.

The following people in the OFM Forecasting Division presently contribute to the development of annual population estimates:

- State and county estimates: Yi Zhao
- City estimates: Diana Brunink, Erica Gardner, Tom Kimpel, Mike Mohrman, Webb Sprague
- Administrative assistant: Rachel Hughes

To: Jamie Howsley; Eric Golemo
Cc: Mike Odren
Subject: RE. Comp Plan update infrastructure deduction

Jamie/Eric,

Regarding the area of a project impacted by road ROW and stormwater facilities in the Battle Ground area, I have the following:

18 Lot subdivision - 42%
167 lot Subdivision - 25%
117 Lot Subdivision - 32%
26.3Ac Commercial - 28% with no frontage since City did that project. If that area was included %age would increase to approximately 34%

These calculations take the developable area only and do not include wetland areas that are not impacted.

Let me know if you have any questions.

Peter.

I am stuck in meetings for the rest of the afternoon today but will see if I or one of my staff can set up a model run in WWHM12 in the morning for comparison. As you all are aware, the requirement to utilize "old growth forest" as the pre-developed site condition is likely what will have the biggest impact on the size of the pond. I will keep you posted.

Eric and Peter,

Attached is the infrastructure deduction for Holsinger's Whispering Pines subdivision. It is approved however under the old stormwater rules. I am being told that the stormwater would likely double if under the new rules. As you can see with the park it is 34% without 31%.

Best,

Jamie

The stormwater management facilities would increase from 9% of the project up to 12.5% project under that scenario. Total infrastructure would go from 34% up to 37.5% if the park dedication is included or from 31% up to 34.5% without the park.

Subject: RE: Whispering Pines Infrastructure Deduction-Battle Ground

Good Afternoon Eric,

Based on the model run that I put together in the WWHM2012 program, utilizing the Auto Pond feature, the pond size went from 1.07 acres up to 2.19 acres which is roughly double the size (2.05 times larger). It is my experience that the Auto Pond feature is very conservative and the pond likely can be optimized further but even with the optimization it appears that there is a significant increase in required detention storage between the old and the new stormwater requirements for the Whispering Pines Subdivision. Let me know if there is anything else I can assist you with.

Sincerely,

Joel Gregory Stirling, P.E.

Subject: Comp Plan update infrastructure deduction

Peter,

Jamie and I attended the hearing on the comp plan. One of the items we are working on is the infrastructure deduction. It is currently set at 27%.

This hasn't changed with the Stormwater code. We have argued that the 27% is likely adequate where you have good to moderately draining soils but not in poorly drained soils. The commissioners asked for some supporting documentation. Our office is working on some info. But, we don't have a lot going on in Battleground right now under the new code. Do you have any examples you could contribute.

Thanks,

Eric

Vancouver, WA 98666-5000

Re: Comprehensive Plan Update - Infrastructure Percent Deduction

To the Board of County Commissioners,

The Development and Engineering Advisory Board (DEAB) has reviewed documents and proposals regarding the current Comprehensive Plan Update. Members of the board have expressed concern regarding the assumed infrastructure deduction percentage being used to develop the plan. The commissioners asked DEAB to provide some info and input regarding the infrastructure deduction percentage. This letter is in response to that request.

Currently the assumed infrastructure deduction percentage rate is 27.7% for residential and 25% for Commercial and Industrial. This rate has not changed with updated stormwater ordinances. While these assumptions may be appropriate in areas of well draining soils, we believe they underestimate the impact in areas of poorly draining soils which is where most of the undeveloped portion of the urban growth area is located. DEAB has conducted some research with the help of other local engineering consultants. We have attached some sample infrastructure percent calculations in soils with fairly low infiltration rates similar to the areas at the fringe of the urban growth boundary. First we looked at a few theoretical examples prepared by SGA Engineering or the county during the previous stormwater code update. On some, it was assumed LID was feasible, but in low rate soils this may not be the case, or utilizing LID may only compensate for the new LID flow standard.

With DOE forested standard with low infiltration the Infrastructure % on these three example projects are: **39%, 51%, and 32%**.

Next we obtained a few calculations on sample projects from several local consultants. These examples do not account for the new LID flow standard. It is assumed this will add cost but not likely take additional area.

Sterling Design provided a calculation for Whispering Pines subdivision. Under the old stormwater rules the infrastructure is 31% with the current adopted rules it goes to **34.5%**.

Olson Engineering provided 4 examples in the Battleground area. No exhibits are attached but could be provided upon request.

The summary is below:

18 Lot subdivision - 42%

167 lot Subdivision - 25%

117 Lot Subdivision - 32%

26.3Ac Commercial - 34%

In conclusion DEAB feels the 27.7% is low and doesn't accurately reflect the percentage of land lost to infrastructure. The average infrastructure percentage in the 8 examples we looked at was about **36.2%**. It should be noted that not all land brought into the urban growth boundary is in poorly drained soil. **But based on a weighted average 32-35% is likely a more accurate range for the assumed Infrastructure Percent Deduction.**

Please let us know if you have any questions.

Respectfully,

Michael Odren, R.L.A.

Chair, Development and Engineering Advisory Board

Eric E. Golemo, PE

Sub-Committee Chair, Development and Engineering Advisory Board
