Clark County Comprehensive Plan 2016 Update
Planning for growth 2015 – 2035

Purpose
This memorandum provides a basic framework and starting point from which the county and its cities may consider population and employment allocation.

Background
In July 2013, Clark County began the process of updating its Comprehensive Growth Management Plan to meet the 2016 periodic update requirement of Chapter 36.70A.140 RCW. Several issue papers have already been prepared to allow the Board to make decisions about the update:

In “Issue Paper 1 - Comprehensive Plan Overview”, Community Planning presented a summary of the county’s Planning Assumptions, the 2013 vacant and buildable lands model (VBLM) inventory, and population and employment projections.

In “Issue Paper 3 – Community Planning presented employment forecasts and suggested a high employment forecast based on input from Washington Employment Security Department (ESD) . Issue Paper 3 was revised as Issue Paper 3.1 to include the 2014 VBLM information. On April 22, 2014, the Board adopted the high employment forecast of 91,200 net new jobs for the twenty year period ending 2035 (Res. 2014-04-XX).

This issue paper (Issue Paper 4) will discuss 2016 population and employment allocations.

Methodology
Allocation of population and jobs is a key step in the planning process. There are three methods for allocating that can be used by the Board:

1) placing growth where it has historically occurred by urban growth area (UGA);

2) allocating growth by UGA based on the proportionate share of total county vacant and buildable lands without concern for capping that growth at current capacity; or

3) allocating growth by UGA according to the proportion of the total county identified vacant and buildable lands, but capped by UGA at currently historical shares.
The following are essential to the outcome regardless of which method is used:

- Maintain coordination and consistency with local comprehensive plans;
- Use official state population forecasts from OFM (already adopted);
- Use the employment projections from ESD (already adopted);
- Continue using the inventory of available VBLM inventory information; a practice since 1994;
- Allow for flexibility where necessary;
- Consider impacts of the recent stormwater regulations on infrastructure needs. Identified vacant and buildable residential lands reflect a 27.7% infrastructure deduction;
- Carrying capacity is assumed on vacant or underutilized single family and multifamily lands, at 4-5 units per acre for urban low, and 9-16 units per acre for urban high; and
- The urban/rural growth percentage split remains at 90/10.

Countywide Population Allocation

Table 1 below shows the current population allocation, and shows where the growth would occur using the OFM medium forecast should the Board use allocation method number 3 as listed above.

**Table 1: 2015-2035 Population Forecast by UGA.**

Employment Allocation

The GMA does not dictate a source that must be considered in planning for future employment. For the 1994, 2004, and 2007 planning efforts, the number of anticipated new jobs in Clark County was developed by the Washington State Employment Securities Department. The forecasts were based on anticipated population growth, workforce participation, unemployment, and percentage of Clark County employees who commute to Oregon for work.

Table 2 below shows the number of net new jobs based on allocation method number 3 as listed above. The Board chose to plan for a total of 91,200 net new jobs. According to the 2014 vacant land model, the county has land capacity for 86,214 net new jobs with an additional 18% growth in public sector jobs raising the total net new jobs to 101,732.

Total 101,732

Conclusion and Recommendation
Much has changed since Clark County first adopted its Comprehensive Plan in 1994. The county’s demographic characteristics have continued to change. Community Planning recommends that population and employment lands be allocated to each UGA based on the above proportional allocations.

NEXT STEPS
With respect to individual UGA allocations, a limited number of alternative land use scenarios should be identified. The scenarios should be used to inform the county’s ongoing transportation modeling efforts in coordination with RTC. In addition, as part of the buildable lands analysis process, the number of available commercial and industrial sites should be identified, and if the analysis points to a shortage, UGA allocations should be adjusted accordingly. Finally, the county should attempt to determine the relative impact of these alternative land use scenarios on the county’s water resources.

  - Issue Notice of Adoption
2005 BOCC Principles and Values

Clark County Board of Commissioners
September 6, 2005 - Comprehensive Plan Work Session

Values/Principles
- Maintain county tax base (generate revenue necessary to provide services)
- Balance between the cities
- Equitable land allocation and jobs/population ratio so that cities have equitable share of jobs - diverse job base
- Vancouver urban area: minimize residential growth (there will be some residential growth but not dense residential growth, especially where there already exists large-lot, high-value development). Minimize doesn't mean "don't" but lower density (maybe 8-15, 8-20 or never larger lot sizes) of residential growth.
- Each city must meet its density and housing mix requirements.
- Mapping: put job lands close to transportation so that capacity is provided to job opportunities
- Build creative opportunities for communities (e.g. farm-based zoning, performance zoning)
- New growth needs to blend well with existing neighborhoods (i.e., transition zones, buffering, gradual transition in development style, type)
- Grounds that where residential and jobs "make sense" - no more "wetland industrial"
- Resulting tax base (e.g., jobs, residential that doesn't result in great demand for schools) needs to be equitable for school districts. Tax base equally distributed between residential and job producing lands.
- Focus Public Investment Areas - " hubs " of job growth that can be serviced efficiently (adjacent Transportation Improvement Program if necessary)
- Breaks/Ease spaces between communities - natural barriers
- Minimize the conversion of productive farmland - those lands which have long-term commercial agriculture viability
  - Is it being used today for commercial agriculture?
  - Balance goals e.g. economic development versus agricultural land preservation.
- Identify "real" urban reserve lands (they need to be readily capable of being converted to urban uses in the future - next 10 years). Think about the unexpected.
- Use an integrated view in examining the proposed boundaries and plan maps.
- Critical areas:
  - Identify those areas that should "never" be urban (critical areas of countywide significance).
  - Minimize inclusion of critical areas for cities that do not have critical area ordinances that have met the test of "best available science."
  - All other factors being equal, select the area that has fewest critical areas.
- Maintain a mix of housing options (a variety of housing densities - large, medium and small lots).

Topics include:
- Employment lands
- Housing
- Community design
- Rural lands
- Environmental
- Tax base
- Other land use
- Mapping implications
- Allocation

Key:
- ✔ Complete
- ❓ Still necessary?
Employment lands principles & values

1. Equalize land allocation and jobs/population ratio so cities have equitable share of jobs – diverse job base

2. Mapping: Put job lands close to transportation so that capacity is provided to job opportunities

3. Ground-truth where residential and jobs “make sense” – no more “wetland industrial”

4. Focus Public Investment Areas – “hubs” of job growth that can be serviced effectively (adjust Transportation Improvement Program if necessary)

5. Maximize the potential for the county’s railroad as a job-creating asset

6. Prioritize lands that are most likely to provide “family-wage jobs” as defined in the comprehensive plan policies
Housing principles & values

1. Vancouver UGB: minimize residential growth (there will be some residential growth but not dense residential growth, especially where there already exists large-lot, high-value development). Minimize doesn’t mean “don’t” but lower density of residential growth.

2. Each city must meet its density and housing mix requirements.

3. Maintain a mix of housing options (a variety of housing densities – large, medium, and small lots).

4. Identify school sites or areas where schools buildings will be necessary inside the new hubs of residential areas (need sites close to where the children will be). Avoid penalizing property owners in the process.
Community Design principles & values

1. Need creative opportunities for communities (e.g. form-based zoning, performance zoning)

2. New growth needs to blend well with existing neighborhoods (i.e., transition zones, buffering, gradual transitions in development style, type)
Rural lands principles & values

1. Minimize the conversion of productive farmland – those lands which have long-term commercial agriculture viability- or- Is it being used today for commercial agriculture?

2. Balance goals e.g. economic development versus agricultural land preservation

3. Identify “real” urban reserve lands (they need to be readily capable of being converted to urban uses in the future – next 10 years). Think about the unexpected.
Environmental principles & values

- **Critical areas:**
  
  1. Identify those areas that should “never” be urban (critical areas of countywide significance)
  
  2. Minimize inclusion of critical areas for cities that do not have critical area ordinances that have met the test of “best available science”
  
  3. All other factors being equal, select the area that has fewest critical areas
Other land use principles & values

1. Ensure good geographic distribution of commercial lands

2. Breaks/Green spaces between communities – natural borders

3. Use an integrated view in examining the proposed boundaries and plan map.

4. Build on the work done for the January 2004 plan map proposal (but modest changes are acceptable)
Tax Base principles & values

1. Maintain county tax base (generate revenue necessary to provide services)

2. Balance between the cities

3. Resulting tax-base (e.g. jobs, residential that doesn’t result in great demand for schools) needs to be equitable for school districts. Tax base equitably distributed between residential and job producing lands
Mapping implications principles & values

1. La Center needs greater economic diversification opportunities and multi-family land use designations

2. Ridgefield needs greater population to balance employment opportunities - meeting 75:25 housing split may be an issue

3. Vancouver UGB – job producing reserve lands need to be included in the boundary

4. Camas density needs to meet 6 units/ acres (but can be exceeded if city desires)

5. Ground “truthing” is extremely important for employment

6. Lands with few if any restraints (“easy”) should be allocated first for employment

7. Employment- reserve overlay for lands served by county railroad corridor
 Allocation principles & values

1. Guided by the values identified \textit{(in the previous topics)}

2. Ground truthing will clarify/define the allocation (versus "assigned")
Planning Assumptions

- GMA requires Clark County and cities to monitor growth patterns through the Buildable lands report – RCW 36.70A.215

- Use information from new development as well as consideration of “reasonable measures” to revise and update growth plans

- Planning assumptions for population and employment forecasts are used to determine number of acres needed to accommodate that growth - based on:
  - Office of Financial Management projections
  - BOCC direction
