Re: Comprehensive Plan Update - Infrastructure Percent Deduction

To the Board of County Commissioners,

The Development and Engineering Advisory Board (DEAB) has reviewed documents and proposals regarding the current Comprehensive Plan Update. Members of the board have expressed concern regarding the assumed infrastructure deduction percentage being used to develop the plan. The commissioners asked DEAB to provide some info and input regarding the infrastructure deduction percentage. This letter is in response to that request.

Currently the assumed infrastructure deduction percentage rate is 27.7% for residential and 25% for Commercial and Industrial. This rate has not changed with updated stormwater ordinances. While these assumptions may be appropriate in areas of well draining soils, we believe they underestimate the impact in areas of poorly draining soils which is where most of the undeveloped portion of the urban growth area is located. DEAB has conducted some research with the help of other local engineering consultants. We have attached some sample infrastructure percent calculations in soils with fairly low infiltration rates similar to the areas at the fringe of the urban growth boundary. First we looked at a few theoretical examples prepared by SGA Engineering or the county during the previous stormwater code update. On some, it was assumed LID was feasible, but in low rate soils this may not be the case, or utilizing LID may only compensate for the new LID flow standard.

With DOE forested standard with low infiltration the infrastructure % on these three example projects are: **39%, 51%, and 32%**.

Next we obtained a few calculations on sample projects from several local consultants. These examples do not account for the new LID flow standard. It is assumed this will add cost but not likely take additional area.

008457

Sterling Design provided a calculation for Whispering Pines subdivision. Under the old stormwater rules the infrastructure is 31% with the current adopted rules it goes to **34.5%**.

Olson Engineering provided 4 examples in the Battleground area. No exhibits are attached but could be provided upon request.

The summary is below:

18 Lot subdivision - **42%**
167 lot Subdivision - **25%**
117 Lot Subdivision - **32%**
26.3Ac Commercial - **34%**

In conclusion DEAB feels the 27.7% is low and doesn't accurately reflect the percentage of land lost to infrastructure. The average infrastructure percentage in the 8 examples we looked at was about **36.2%**. It should be noted that not all land brought into the urban growth boundary is in poorly drained soil. **But based on a weighted average 32-35% is likely a more accurate range for the assumed Infrastructure Percent Deduction.**

Please let us know if you have any questions.

Respectfully,

Michael Odren, R.L.A.

Subject: RE: Comp Plan update infrastructure deduction

Jamie/Eric,

Regarding the area of a project impacted by road ROW and stormwater facilities in the Battle Ground area, I have the following:

18 Lot subdivision - 42%
167 lot Subdivision - 25%
117 Lot Subdivision - 32%
26.3Ac Commercial - 28% with no frontage since City did that project. If that area was included %age would increase to approximately 34%

These calculations take the developable area only and do not include wetland areas that are not impacted.

Let me know if you have any questions.

Peter.

Were you able to come up with anything? I would like to respond to the Commissioners this week. Our office is working on some info. But, we don't have a lot going on in Battleground right now under the new code. Do you have any examples you could contribute.

Peter,

Jamie and I attended the hearing on the comp plan. One of the items we are working on is the infrastructure deduction. It is currently set at 27%.

This hasn't changed with the Stormwater code We have argued that the 27% is likely adequate where you have good to moderately draining soils but not in poorly drained soils. The commissioners asked for some supporting documentation. Our office is working on some info. But, we don't have a lot going on in Battleground right now under the new code. Do you have any examples you could contribute.

Thanks,

Eric

Subject: RE Whispering Pines Infrastructure Deduction-Battle Ground

The stormwater management facilities would increase from 9% of the project up to 12.5% project under that scenario. Total infrastructure would go from 34% up to 37.5% if the park dedication is included or from 31% up to 34.5% without the park.

Sincerely,

Joel Gregory Stirling, P.E.

Subject: RE: Whispering Pines Infrastructure Deduction-Battle Ground

Good Afternoon Eric,

Based on the model run that I put together in the WWHM2012 program, utilizing the Auto Pond feature, the pond size went from 1.07 acres up to 2.19 acres which is roughly double the size (2.05 times larger). It is my experience that the Auto Pond feature is very conservative and the pond likely can be optimized further but even with the optimization it appears that there is a significant increase in required detention storage between the old and the new stormwater requirements for the Whispering Pines Subdivision. Let me know if there is anything else I can assist you with.

Sincerely,

Joel Gregory Stirling, P.E.

I am stuck in meetings for the rest of the afternoon today but will see if I or one of my staff can set up a model run in WWHM12 in the morning for comparison. As you all are aware, the requirement to utilize "old growth forest" as the pre-developed site condition is likely what will have the biggest impact on the size of the pond. I will keep you posted.

Sincerely,

Joel Gregory Stirling, P.E.

Eric and Peter,

Attached is the infrastructure deduction for Holsinger's Whispering Pines subdivision. It is approved however under the old stormwater rules. I am being told that the stormwater would likely double if under the new rules. As you can see with the park it is 34% without 31%.

Best,

Jamie
