Subject: RE: Comments to Comprehensive Land Use Plan Draft Environmental Impact Statement (septic system use and soil conditions in the rural area.)

Hello all, The draft Environmental Impact Statement for the Clark County Comprehensive Land Use Plan states that the rural area has very limited soils for septic system use. However our industry knows differently. I was contacted by Clark County Councilor David Madore to see if we (TAC

Committee) were interested in responding. I told him I thought we were interested in commenting to the draft environmental statement. I contacted Nathan Ek concerning this matter since he had earlier expressed concern about this misinformation in the impact statement.

Nathan and I have developed a draft comment response for your review. If you have concerns or major comments please respond quickly back to me.

There is not much time left to submit our comments. The plan is to submit our comments tomorrow afternoon. It should be noted that we are not endorsing any of the alternative proposals, but the environmental impact statement be factual in regard to septic system use.

It is thought that Nathan Ek and I would sign the comment letter as representatives of the TAC Committee and also list you as supporting the submitted comments (private sector, not the Health Department). Thank you for your time. Mark Collier, ASD2 inc., Collier Septic Consulting and Design, (360)-798-6456.
