Good morning Councilor

There appears to be a misunderstanding I believe I responded to your questions. Staff provided a clarification when you first asked for input in early November of last year. Community Planning, PA's Office, and GIS Staff as a team reviewed your "Proposed Changes to Planning Assumptions dated 11/4/2015 In our redline back to you under "Ref item #2 it clearly stated that Forest zoned lands in current use program (Timber or Designated Forest Land (DFL)) were excluded from the number of developable lots in the DSEIS and that is consistent with the footnote in Table 1-2, page 1-3 in the DSEIS

It is my understanding that lands current use program were excluded from all zones

Your request for GIS record and software algorithms will have to come from GIS staff If your request is public record request I will step aside and turn it over to the PA's Office to handle because I cannot provide or create information Planning Staff do not have

Finally, estimating the potential number of lots in the rural area by Planning and GIS Staff was to provide information to ESA. As I stated at the Councilors hearing of February 16, 2016 Community Planning and GIS staff provide estimates of potential number of lots in the rural area based on current zoning and additional lots that could be created Mr Michaelis from Thorpe and Associates stated at the January 13 work session that rural lots develop differently than urban lots.

What we have is vacant buildable lands model (VBLM) for the urban area. And, until the creation of Alternative 4, there has not been a need to develop rural planning assumptions or rural vacant buildable lands model So, I am not sure what you mean by original rural assumptions I am copying Mr. Bob Pool and Ken Pearrow so they can provide you the excel spreadsheet if it exists. Please, let me know if you have further questions Thank you.

Best,

Oliver

Subject RE Documents for BOCC hearing on comp plan 2/23

Oliver,

Note that my email has others questions for you Please provide those answers.

Thank you,

David

Hello Councilor

Exhibit 1 attached to the supplemental staff report clearly states that "Forest zoned lands in the Current Use program (Timber or Designated Forest Land (DFL) were exclude and that is consistent with the footnote in Table 1-2 in the DSEIS on page 1-3 You request for GIS record and software algorithms will have to be made to GIS staff Please, note that we don't the same issue with Rural and Agricultural designated lands Please, let me know if you have questions Thanks

Best,

Oliver

Oliver,

The report that you attached states the following.

"Column A erroneously states that Forest lands are included in the count of potential new lots Exhibit 1 document clearly states on page 1 under Excluded – Forest zoned lands in the Current Use program (Timber or Designated Forest Land (DFL)) "

That conflicts with data that I see published in the DSEIS for Alternative 4 and the parcel level database records that I received from GIS thus far. The Excel database exported from the Alternative 1 and Alternative 4 GIS map includes the Current Use status of each parcel. I believe that the potential lot tallies would be substantially lower than those published in the DSEIS if Current Use parcels were excluded from the counts. This appears to be a huge error in the DSEIS.

Please provide me a link to the parcel level database in Excel format with all of the fields included so I can check the records.

Also, the note in the same document only refers to Forest parcels. The assumptions refer to all three rural zones, R, AG, and FR. Are the column A assumptions counting Current Use parcels that are zoned R and AG? Is it your believe that they should be counted?

I also ask for the detailed GIS records and software algorithms that generated the DSEIS tallies with the detailed parcel level records so I compare those to mine

Christine Cook told us on Tuesday that the column A assumptions were not the original planning assumptions and that there are others. You also spoke at length saying that the column A assumptions were not the rural assumptions, but were the urban assumptions. If the column A assumptions are not the original rural assumptions, then please share exactly and specifically which column A assumptions are not the original and what other assumptions there are. We need to have a complete and exact list

Since the timing is so short, I ask you to please provide the requested info as quickly as possible so we can have these crucially important facts for Tuesday's hearing

Thank you,

David

Hello Councilors:

Attached, please find supplemental staff report for the February 23, 2016 deliberations. These are now posted on the Councilor's GRID. Also posted on the GRID is a map developed by GIS Staff showing areas designated as Agri-Forest as a result of the 1994 Growth Plan and what the current zoning is. This map was prepared in response to requests from the Council. Please, if you have questions let me know. Thanks and have a good weekend.

Best,

Oliver

Tina,

Here are attachments for the Board hearing on Tuesday on the comp plan. And here's a link to a pdf map that is too large to send via email. Let me know if this works otherwise we may have some other options from GIS
